anymore!

• THE QUESTION WE SET OUT TO ANSWER

So can **designers** work
inside their products,
without learning **T**?

• WELL...

Your Product is the new workspace.

— Hey, I'm Omri. Founder of  Spring

• TODAY / 20 MINUTES

01 THE DEAL

Working inside
your product is
the best thing

02 WHAT YOU WON'T NEED TO LEARN

Any of this.

- > ~~git~~
- > ~~localhost~~
- > ~~terminal~~
- > ~~docker~~
- > ~~npm~~

● TODAY / 20 MINUTES

BECAUSE

It's not your job.

• WHERE THEY LIVE

Two types of AI tools for Product Designers

01

Outside your product

They start fresh — no context. You teach them everything. The output goes to a developer to ship.

02

• THE NEW LINE

Inside your product

They read your codebase and design system. They write to the product you've already built.

CLAUDE
CODE

- WHAT IS CLAUDE CODE, ANYWAY?

Claude Code is an AI tool that wraps your **existing** product. It learns how it's built, how it's **designed**, and reads / writes new features at light-speed.

But what does it have to do with **us**?

— THREE OUTLETS WHERE IT CHANGES OUR WORK

01

Problem Discovery

- Audit empty states across the entire product.
- Cluster six months of support tickets by friction theme.

02

Ideation

- Sketch variants in your real design system.
- Brainstorm copy that matches your existing voice.

03

Prototyping

- Push a working prototype to a feature branch.
- Get a preview link without pinging a developer.

• UNTIL NOW

There were three walls.

Three things designers couldn't do alone — without a developer holding your hand the whole way.

WALL 01

GitHub

Repos. Branches. Clones. PRs.

The language every codebase is written in — so you can ship alongside your developers, not in a parallel file.

WALL 02

Localhost

Running the product on your laptop.

One of the most complex parts of any setup — even for engineers. This is where most designers we know got stuck.

WALL 03

"Good" code

Patterns, conventions, quality.

What does "good" even mean here? You don't know what you built. You don't know what you don't know.

HOW SPRING WORKS

Watch it work.

Spring wraps your product with the dev infrastructure — git, server, files, AI — so you can build inside it.

03 Designed software comes out.

CODEBASE

PR #843 MERGED Tighten checkout CTA hierarchy

DESIGNED · BUILT · SHIPPED

— PS

It's a blessing, not a curse.

Don't overthink it. Go play, have fun, ship something tiny. The hard part isn't the tooling anymore — it's deciding what to make.
